

Natural recharge Drinking Water Quality Report 2023 Rainfall Water Table Saturated Aquifer

Welcome to Terrebonne Domestic Water District

Terrebonne Water District is the stewards of your drinking water. Agate Water has received outstanding performance awards from the state of Oregon Health Authority. We strive to maintain the highest level of confidence in the water you drink. From snowmelt to rainfall sources replenishing our water supply, our team works around the clock to make sure we are producing the best water for your needs. The information in this annual report is for the period of January 1 to December 31, 2023, and including the past 5 years of water testing. We routinely monitor for over 500 regulated and unregulated contaminants in all sources of your drinking water. Our water sources are wells recharged from rain and snow melt. Please help us in conserving our water sources for our future generations.

If you have any questions after reading this report, please feel free to contact Dan Bruce at 541.548.2727, You may also visit tdwd.org for meeting links. Or visit https://yourwater.oregon.gov/inventory.php?pwsno=00860 for more information. Scroll to the bottom to search all info.

An Important Message from the Environmental Protection Agency

The sources of (both tap and bottled water) include rivers, lakes, streams , ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals and human activity.

Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic contaminants, such as salts and metals, which can be naturally-occurring or result from urban storm-water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and Herbicides, comes from agricultural, urban storm-water runoff, and residential uses.

Organic Chemical Contaminants, synthetic and volatile organic chemicals are byproducts of industrial processes and petroleum production, and also from gas stations, urban storm-water runoff, and septic systems.

Radioactive Contaminants, Naturally occurring or the result of oil and gas production and mining activities.

Drinking water and bottled water may contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk, More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline (800-426-4791).

Important Information About Water and Your Health

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/Aids or other immune system disorders, some elderly, and infants can be particularly at risk from Infections. These people should seek advise about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants. For more information call the Safe Drinking Water Hot Line 1-800-426-4791. Additional information can be found on the CDC website: www.cdc.gov/ healthywater/drinking/public/faq.html.

Lead in Drinking Water....*Are You at Risk?*

Elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Terrebonne Domestic Water District is responsible for providing high quality drinking water to your tap, we cannot control the variety of materials used in plumbing components in your home. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water to drink or cooking. If you are concerned about lead in your water, you may wish to have your water tested Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http:// www.epa.gov/safewater/lead, www.leadline.org, or by contacting Edge Analytical, drinking water testing laboratory 541-639-8425.

You can see our most recent test results in the data table below. We are required to report only those substances that were present at detectable levels. We are allowed to monitor for some contaminants less than once per year, therefore some of the data can be more than one year old. Below is the data from within the last 5 years.

Inorganic Contaminants	Units	MCL	MCLG	Range/Result	Did a Violation occur?	Likely Source
2022 - Arsenic	ppb	10	0	1.7	No	Erosion of natural deposits
2022 - Barium	ppm	2	2	0.0043	No	Erosion of natural deposits
2022 - Chromium	ppb	100	100	1.1	No	Erosion of natural deposits
2022 - Fluoride	ppm	4	4	0.21	No	Erosion of natural deposits
2023 - Nitrate	ppm	10	10	1.52	No	Erosion of natural deposits
Unregulated Contaminants						
*2022 - Sodium	ppm	N/A	N/A	23.0	No	Erosion of natural deposits
*Sodium is not regulated and for guidance or visit www.epa.					•	ct your health care provider
Lead and Copper	Units	MCLG	AL	90 th %	Did a Violation occur?	Likely Source
2022 - Copper	ppm	1.3	1.3	0.0533	No	Household plumbing

- AL Action Level, the concentration of a contaminant which if exceeded, triggers treatment or other requirements.
- EPA Environmental Protection Agency, sets water quality standards and establishes methods and monitoring requirements for water utilities.
- MCL Maximum Contaminant Level, the highest level of a contaminant that is allowed in drinking water. MCL's are set as close to the MCLG's as feasible using the best available treatment technology.
- MCLG Maximum Contaminant Level Goal, the level of a contaminant in drinking water which there is no known or expected risk to health. MCLG's allow a margin of safety.
- PPB Parts Per Billion. the equivalent of one second in 32 years.
- PPM Parts Per Million, the equivalent of one second in 12 days.
- pCi/I Picocuries Per Liter, a measure of radioactivity.
- Result the column that shows you what level of contaminant was found in the water you drink.

Terrebonne Domestic Water District Source Assessment

An assessment of our water system has been completed by the Department of Human Services to determine susceptibility to potential sources of contamination. A copy is on file by contacting the office @ 541.548.2727.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's safe drinking water hotline at 1-800-426-4791.
